WIRELESS TECHNOLOGY

GETTING STARTED

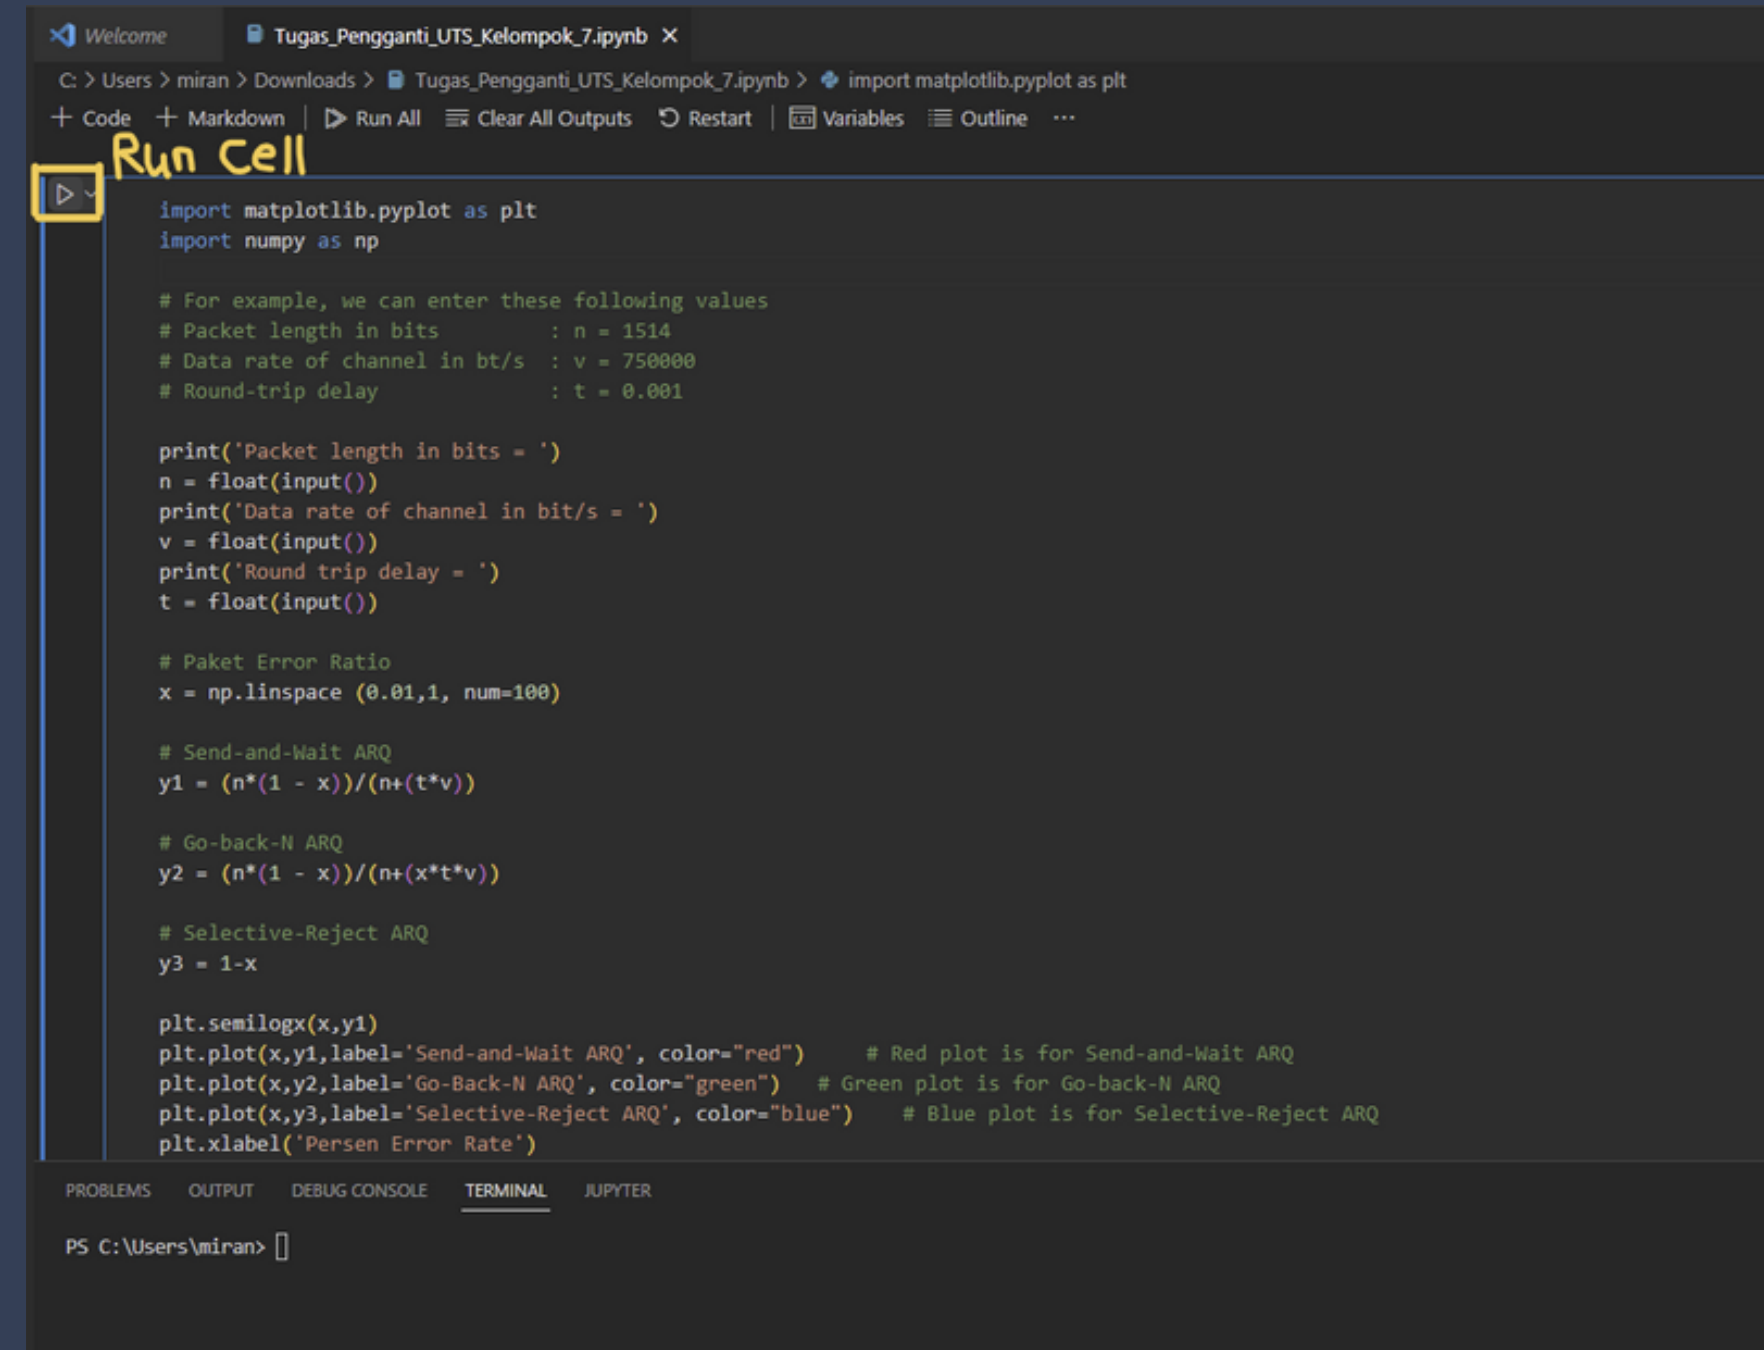

To use this program, you will need to have Python 3 and Anaconda installed on your computer. You can download Python 3 from the official website: Python and Anaconda from the official website: **[Anaconda]** (<https://www.anaconda.com/products/distribution>).

Aside from that, you need to install the Matplotlib and Numpy. You can install the two libraries from their official website: **Matplotlib** and **Numpy** .

RUNNING THE PROGRAM

To run the program, open File Explorer and navigate to the directory where the program is saved. Then, open the program with Visual Studio Code:

1) Run the first cell

```
import matplotlib.pyplot as plt
import numpy as np

# For example, we can enter these following values
# Packet length in bits      : n = 1514
# Data rate of channel in bt/s : v = 750000
# Round-trip delay           : t = 0.001

print('Packet length in bits = ')
n = float(input())
print('Data rate of channel in bit/s = ')
v = float(input())
print('Round trip delay = ')
t = float(input())

# Paket Error Ratio
x = np.linspace (0.01,1, num=100)

# Send-and-Wait ARQ
y1 = (n*(1 - x))/(n+(t*v))

# Go-back-N ARQ
y2 = (n*(1 - x))/(n+(x*t*v))

# Selective-Reject ARQ
y3 = 1-x

plt.semilogx(x,y1)
plt.plot(x,y1,label='Send-and-Wait ARQ', color="red")    # Red plot is for Send-and-Wait ARQ
plt.plot(x,y2,label='Go-Back-N ARQ', color="green")    # Green plot is for Go-back-N ARQ
plt.plot(x,y3,label='Selective-Reject ARQ', color="blue")    # Blue plot is for Selective-Reject ARQ
plt.xlabel('Persen Error Rate')
```

RUNNING THE PROGRAM

2) Enter the three values required: Packet length, channel data rate, and round trip delay (you can refer to the comment example in the code):

```
Go Run Terminal Help Tugas_Pengganti_UTS_Kelompok_7.ipynb - Visual Studio Code

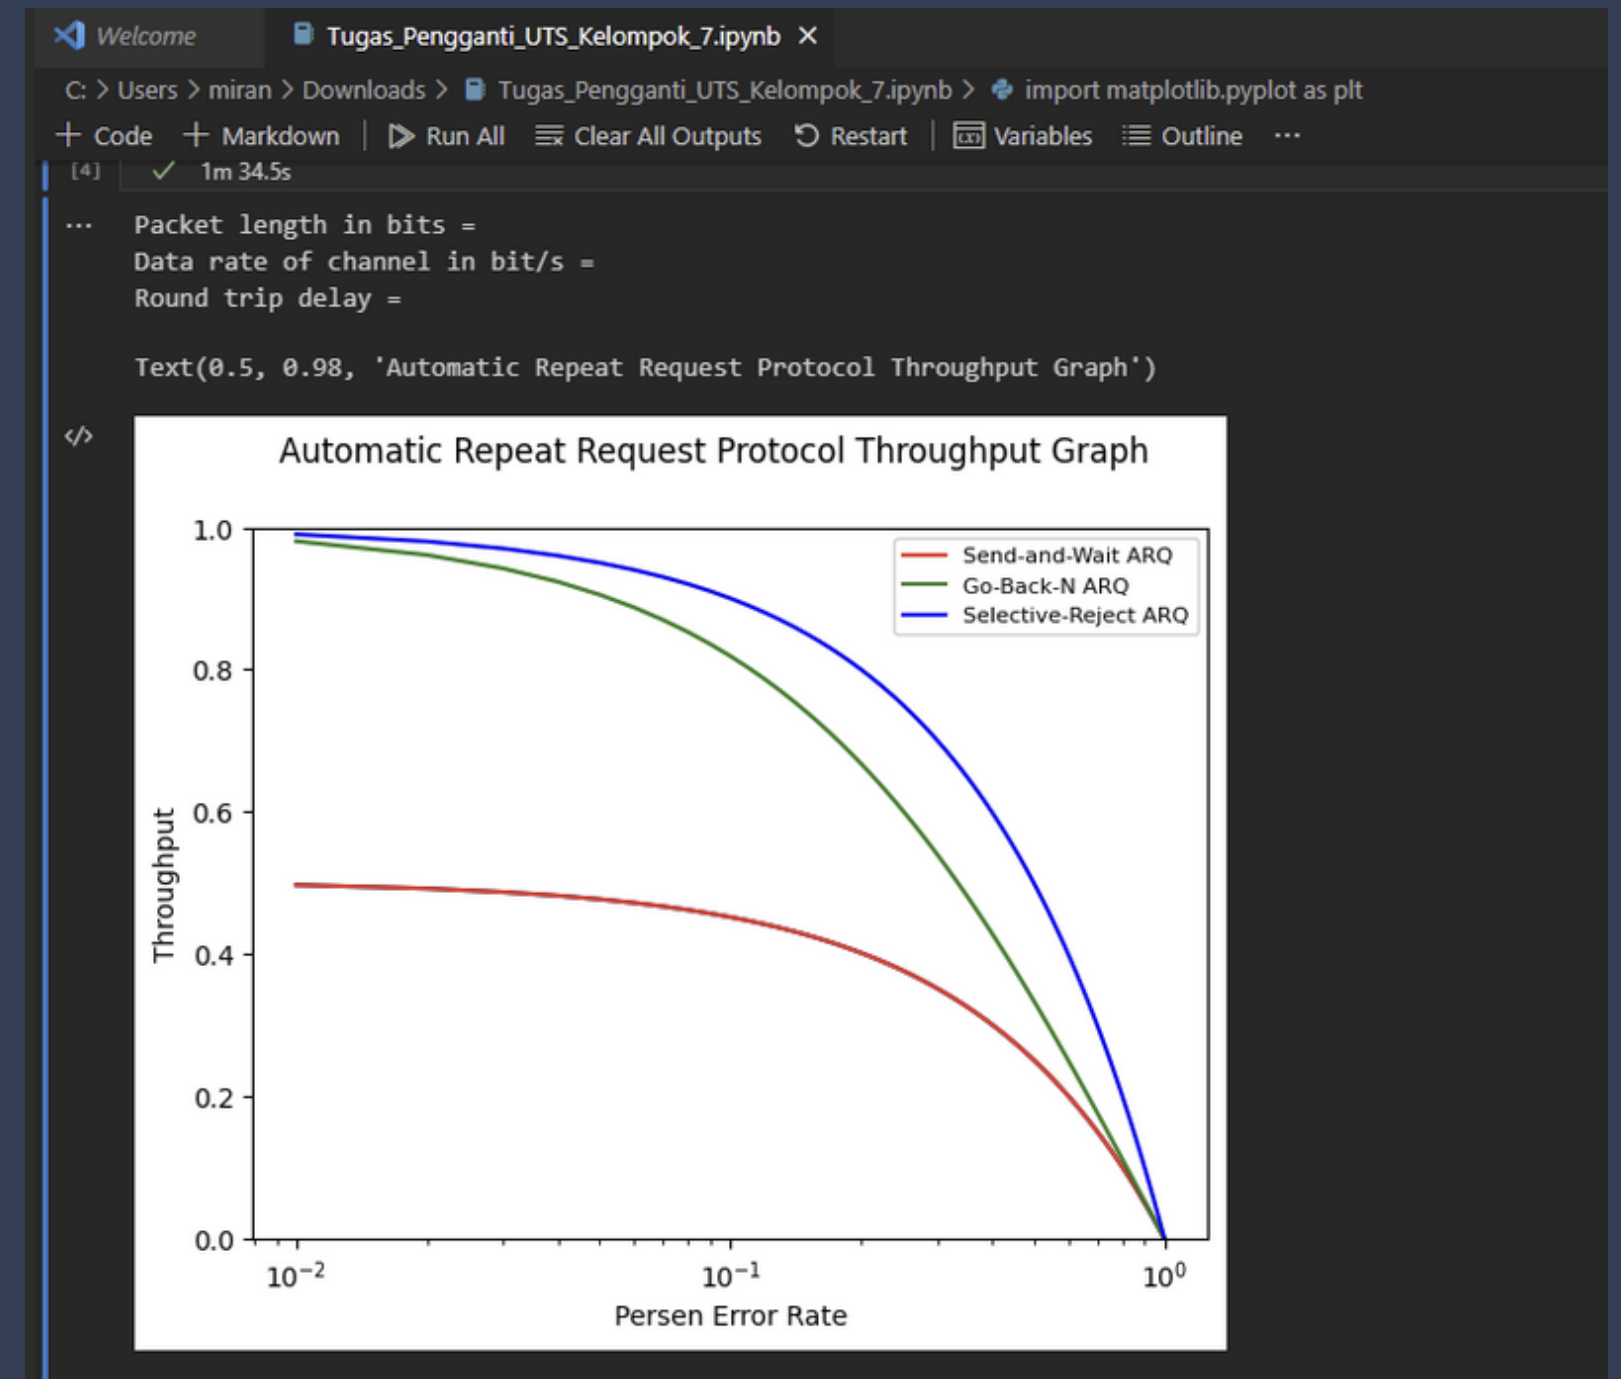

Welcome Tugas_Pengganti_UTS_Kelompok_7.ipynb X
C: > Users > miran > Downloads > Tugas_Pengganti_UTS_Kelompok_7 Press 'Enter' to confirm your input or 'Escape' to cancel
+ Code + Markdown | Interrupt Clear All Outputs Go to Restart Variables Outline ...

plt.semilogx(x,y1)
plt.plot(x,y1,label='Send-and-Wait ARQ', color="red") # Red plot is for Send-and-Wait ARQ
plt.plot(x,y2,label='Go-Back-N ARQ', color="green") # Green plot is for Go-back-N ARQ
plt.plot(x,y3,label='Selective-Reject ARQ', color="blue") # Blue plot is for Selective-Reject ARQ
plt.xlabel('Persen Error Rate')
plt.ylabel('Throughput')
plt.ylim((0,1))
plt.legend(fontsize="8", loc='upper right')

plt.suptitle("Automatic Repeat Request Protocol Throughput Graph")

# x axis values
[4] 9.4s
... Packet length in bits =
```

3) Click "Enter" to display the graph output of the ARQ

RUNNING THE PROGRAM

You can also run the program through Google Colaboratory through this [link](#). Similar to the VS Code step, you can click on the button to run the code within the cell.

4) To get the delay average, click run on the second cell

```

Run Cell
# Calculating ARQ Method Delay
# Transmission delay for Send-and-Wait ARQ
d1 = y1 / x
# Transmission delay for Go-Back-N ARQ
d2 = y2 / x
# Transmission delay for Selective Reject ARQ
d3 = y3 / x

#Plot for Delay
plt.semilogx(x,d1)
plt.plot(x,d1,label='Send-and-Wait ARQ', color="red")    # Red plot is for Send-and-Wait ARQ
plt.plot(x,d2,label='Go-Back-N ARQ', color="green")    # Green plot is for Go-back-N ARQ
plt.plot(x,d3,label='Selective-Reject ARQ', color="blue")    # Blue plot is for Selective-Reject ARQ
plt.xlabel('Persen Error Rate')
plt.ylabel('Delay')
plt.ylim(0, 10)
plt.xlim(0.1, 1)
plt.legend(fontsize="8", loc='upper right')
plt.suptitle("Automatic Repeat Request Protocol Delay Graph")

```

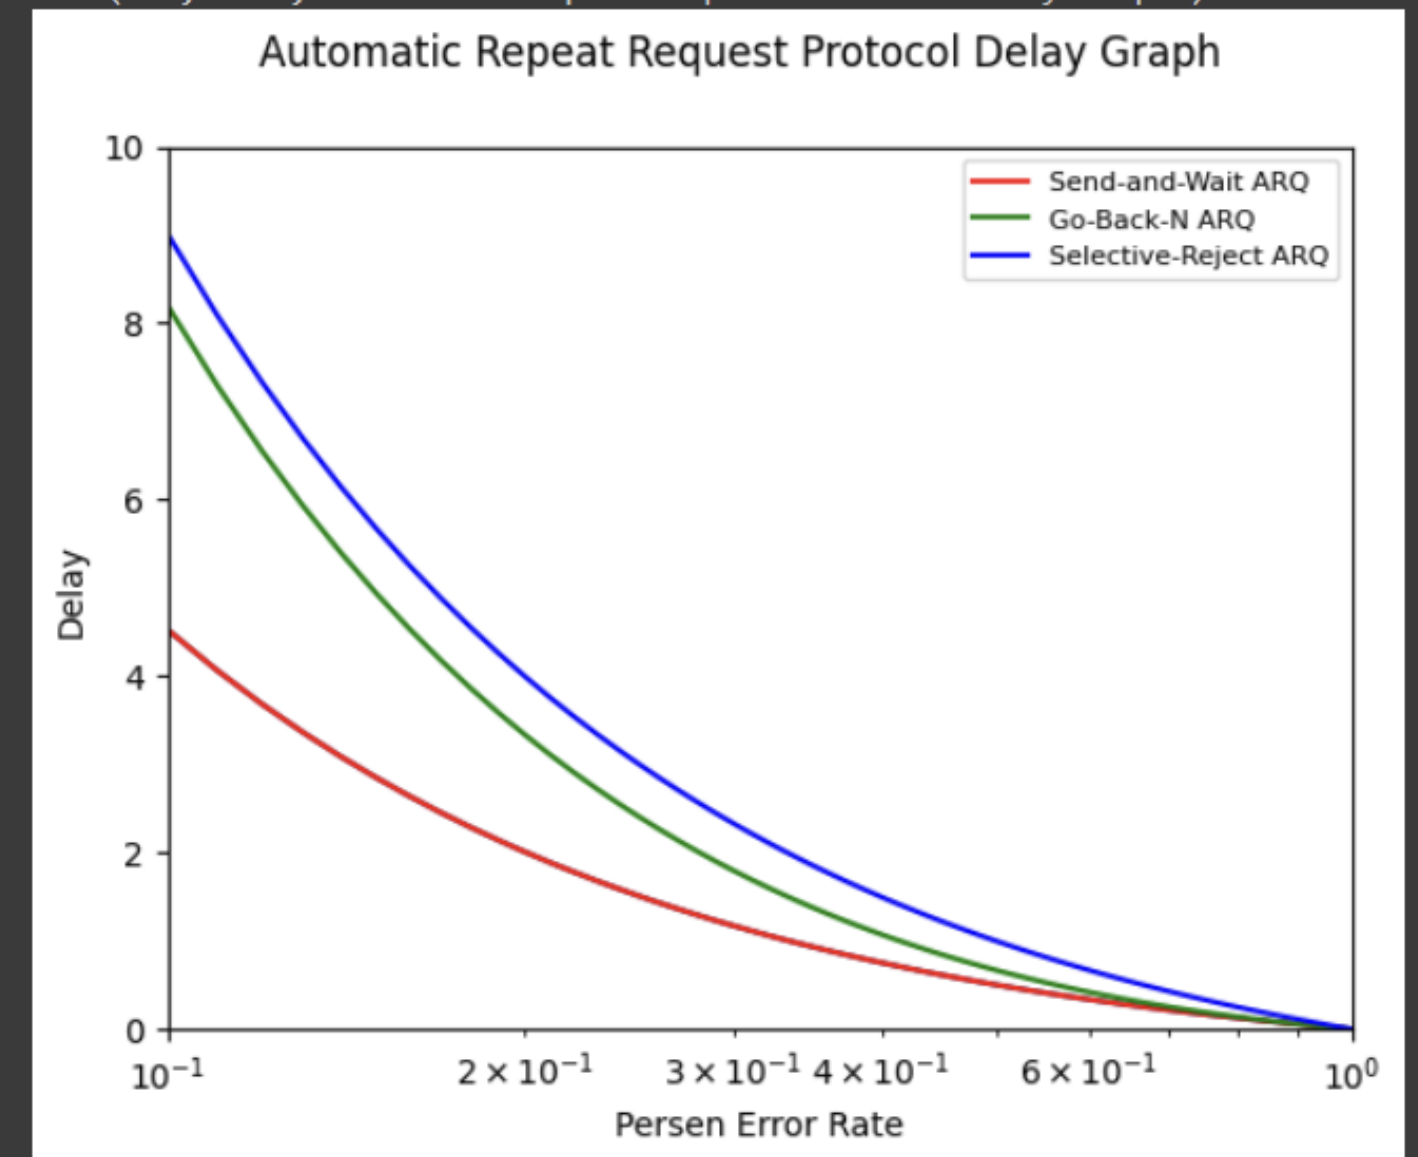

5) The delay graph will then be shown when the run cell button has been clicked

```

plt.ylim(0, 10)
plt.xlim(0.1, 1)
plt.legend(fontsize="8", loc='upper right')
plt.suptitle("Automatic Repeat Request Protocol Delay Graph")

```

Text(0.5, 0.98, 'Automatic Repeat Request Protocol Delay Graph')

RESULT

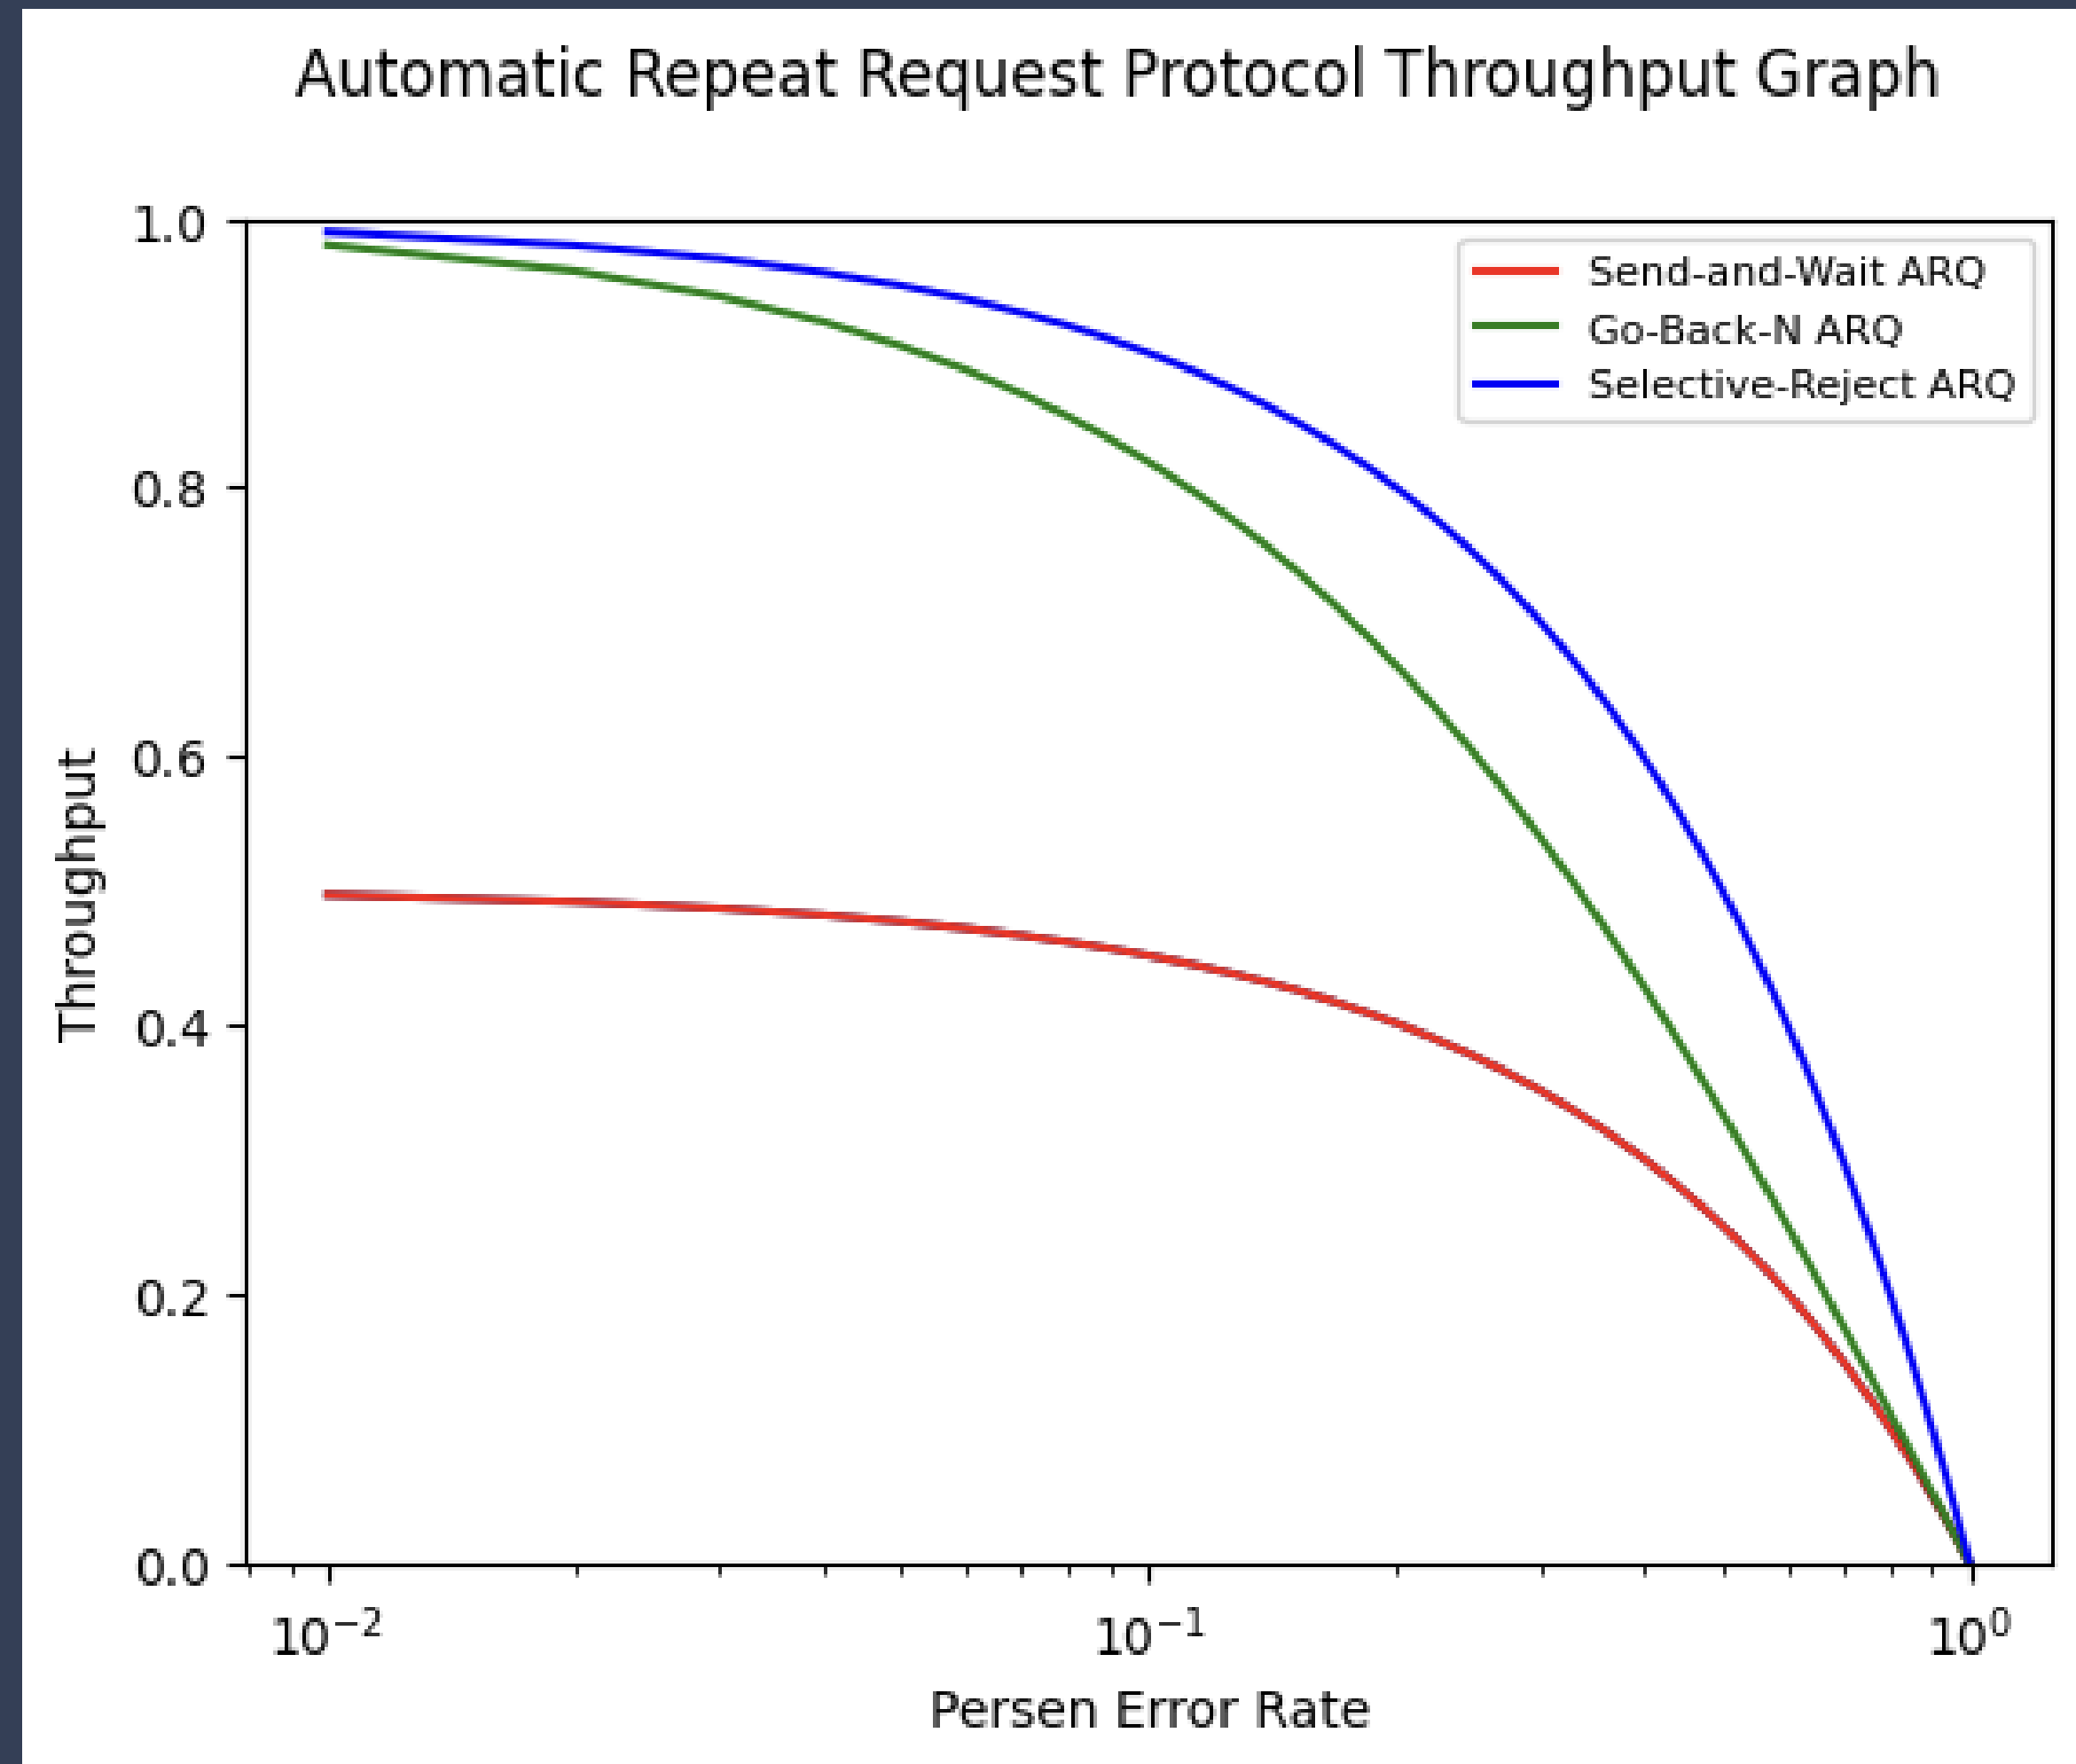

ARQ PROTOCOL THROUGHPUT GRAPH

Packet length in bits = 1514

Data rate of channel in bit/s = 750000

Round trip delay = 0.002

Group 7 Midterm Replacement Assignment

RESULT

ARQ PROTOCOL DELAY AVERAGE GRAPH

Packet length in bits = 1514

Data rate of channel in bit/s = 750000

Round trip delay = 0.002
